

EDUCATIONAL TRIPS FOR STUDENTS AND TEACHERS

Outdoor learning is a great way to develop inquiry based learning. It engages students in active and independent thinking when they come across things that stimulate their interest and curiosity. Bringing students overseas also enables them to experience things they would not be able to see or do in their homeland and open up their thinking horizon to appreciate and understand the Science and beauty of different environments and nature.

Besides *educational trips* for students, we also organise *learning journeys* for teachers that are designed to help them "recharge" and generate new ideas for teaching. Our educational trips are **UNIQUE**. We worked with academic subject experts to design well thought itineraries where participants not only enhance their Science knowledge through observations, experiments and activities, but also sightsee and explore the arts, geography, history, culture and tradition of that country. **Opportunities for students and teachers to visit or have exchanges with established schools in those countries can also be arranged.**

Why are we UNIQUE? Our trips include some/ all of the following which are *not* provided by any tour operators: (1) Accompanied by a highly qualified Education Facilitator who can point out the science concepts observed throughout the journey (2) science ideas, experiments, worksheets and/or learning booklet (3) gadgets like fun tools and materials given for activities purposes (4) visits or exchanges to local schools that have won awards in their countries or have been engaged in innovative ways of teaching and learning (5) Specially designed and customized itineraries/ activities that promotes Inquiry-based learning!

THAILAND

The educational trip can be in the duration of 3-5 days depending on itinerary. Most of the activities will be carried out at the outskirts of Bangkok or nearby provinces.

Besides visiting some of the places of interests in Bangkok, we can also arrange some of these interesting activities to enhance the group's learning experience:

Staying in nature resort which includes boat trips

- at night to see and learn about fireflies
- Visit Floating market to understand the culture and tradition of Thai people
- Visit salt field to understand how salt is extracted and produced
- Visit famous national parks to view stunning waterfalls and spot interesting wild life and rare plants
- Visit and plant mangroves to appreciate environmental conservation and enhance ecology learning

GUILIN, CHINA

Due to longer travel, we will encourage that this educational trip be in the duration of at least 5-7 days depending on itinerary.

Guilin is a beautiful place in

China with significant history and culture. It is well-known for its beautiful scenery, famous rivers and hills.

Some of the interesting activities we can arrange:

- Visit the famous water conservancy project in Guilin and find out the rich history and intelligence behind it
- Interesting Cormorant Fishing Ecological tour
- Learn about the people and their unique lifestyles.
- Take a breath-taking boat trip along the famous Li River and see the magnificent hills
- Visit famous hills in Guilin where you can view natural waterfalls, beautiful rivers and amazing caves and limestone.
- Engage in visits and exchanges with reputable schools and institutions.

MALAYSIA *(Explore Cultural and Ecological Aspects. Experiential Trip with NO school exchanges)*

By Coach Only

This 2D1N trip is specially designed to include reasonable hands-on experiences and activities for students to understand and experience the rich culture of Malaysia Kampong; explore shoreline marine life and engage in fun learning and appreciation of nature and ecology.

- Visit Malay Village and be introduced to authentic Malay Houses and be engaged in fun kampong life experiences
- Learn common fruits found in villages and experience harvesting and tasting of these fruits fresh from the trees
- Experience making and playing of kampong toys
- Explore the rich shoreline marine life guided by experienced shoreline expert
- Ecological Learning in tropical forest rich with native plants
